Ministry of Health
Palestine Medical Complex
Palestine Medical Complex (PMC) was established in August 2010.
Our Vision

To reach the highest level as a medical institution through applying the international medical standards, in order to provide health and medical care services with Safe and High quality
Our mission

▪ Continuous hard work and efforts to prepare a qualified medical, nursing and technical staff.
▪ Provision of advanced and modern necessary equipments.
The Palestine Medical Complex has four main suites as well as the opening of the dialysis department.
Introduction to Palestine Medical Complex (PMC)

- Total No of Employees 860
- Total No of Beds 302
- Occupancy bed rate about 98.8%
- It is referral hospital because it contains rare specialties and is a reference for all governorates.
Human Cadres Distribution

- Nursing No: 42%
- Specialist Doctors: 9%
- Administrative: 19%
- Resident Doctors: 19%
- Paramedics: 11%
Main Buildings of the Palestine Medical Complex

1. Ramallah sons Wing:
Ramallah Wing

➢ Original old hospital build in 1960.
➢ 4 floors.
➢ 13 wards.
➢ 150 beds.
2. Emergency Wing
Emergency Wing

- 87 qualified medical staff.
- 20 Beds, including 4 beds for pediatric emergency.
- Laboratory.
- Radiology.
- MRI and CT scan.
- 2 theaters room.

(Alkuwaite)
Cardiac Specialized Surgery Wing

✓ Consist of 5 floors, specialized for surgical operations for all ages.
✓ 4 Room theaters
✓ Cardiac Cath
✓ 60 beds.
✓ Outpatient clinics.
✓ Advanced ophthalmology clinics.
4. Pediatric Wing (Albahraine)
Pediatric Wing

- Consist of 5 floors
- 67 beds.
- 9 pediatric ICU beds.
- 4 ER Pediatric beds
- 20 incubators.
- Laboratory.
- Radiology
- 1 theater room.
- Pediatric outpatient clinic.
Kidney Dialysis Department

- It was newly constructed 2017.
- It Consists of 49 Beds and Dialysis Machines.
The steam system consist of a diesel boiler which supplies steam through steel pipes to laundry and central sterile service department (CSSD). Then the steam will be used by washers, dryers and autoclaves.
The steam consider as a vital part of the PMC, without it most of the PMC work will stop and the patient’s life will be in real danger. Steam is used mainly for two department:

- **Laundry department**
  
  1-washers
  2-dryers
We should everyday wash the followings:

✓ Washing and drying beds sheets and patient covers.

✓ For the operating rooms we do washing and drying for medical staff uniforms, patient wears and bed cover, then all these stuff have to enter the CSSD department to be sterilized into autoclaves.
In this department the autoclaves use the central steam to remove germs from medical material.

We should every day sterilize the followings:

✓ The medical and surgical instruments that used in operating rooms.
✓ The medical staff uniforms, patient wear and bed in the operating room.
Problems of steam in PMC

➢ High diesel consumption, the steam boiler is working everyday from 5Am until 10Pm
➢ Cause high environmental pollution
➢ The steam boiler is old and always it needs maintenance.
➢ The PMC department and building are continually increasing and the steam system capacity isn’t enough to add more washers, dryers or autoclaves.
Thank you
